breathing star BSP-MT 10-95

Efficient Compressed Air Treatment System for Industrial and Medical Breathing-air

Short description

BSP-MT10-95 heatless adsorption dryers with integral purification and catalytic stages are designed to treat compressed air reliably and efficiently to meet the medical breathing air requirements of the European Pharmacopia and other relevant specifications. The units are constructed in a compact manner and designed to be free-standing. They are equipped with built-on pre- and after filtration and are sized for volumetric flows of up to 1371 m³/h (suction capacity of the compressor referring to a compression of 13 bar.).

Compressed air first enters the validated GL pre-filter into one of two twin-vessels; both filled with a specific drying-agent. One vessel dries and removes harmful vapours from the compressed air while the other vessel undergoes regeneration. At the start of the drying-cycle, this vessel is open to atmosphere and a small proportion of dried compressed air passes through the adsorption bed, transporting the humidity and harmful vapours out. When this procedure is complete, the vessel is re-pressurised in readiness to repeat the drying procedure. Continuous, uninterrupted operation is maintained utilising so-called pressure-swing technology together with individually operated main- and exhaust valves.

Dry compressed air subsequently enters the integral purification and catalytic stage where oil-vapour, odours, gaseous vapours and traces of carbon-monoxide are reliably removed. Finally, the clean, treated air exits via the validated GL after-filter into the downstream compressed air network.

The BSP-MT10-95 breathing-air treatment system operates a fixed, timed changeover-cycle between the two

dryer vessels. Where the application requires additional monitoring, the installation of a dew point sensor is available as an option: The chosen pressure dew point settings (changeover set-point) allow the changeover times of the individual vessels to be adjusted to meet operating requirements whilst providing reliable monitoring of the dryers performance. An adjustable alarm is available via voltage-free signal.

Scope of supply:

Breathing-air treatment system with GL pre- and after filtration; available with optional dew point dependent switching (DDS).

¹⁾ m³/h, relating to 1 bar_a and 20 °C at the compressor suction capacity. Subsequently compressed to 13 bar_e and 35 °C inlet temperature to the dryer at 100 % relative humidity – for pressure dewpoint of -40 °C.

Operating range

Site selection	frost-free indoor installation in a non-hazardous environment
Ambient temperature	1.5 to 50 °C
Compressed air inlet temperature	25 to 50 °C
Operating pressure	5 to 16 bar _e
Medium	Compressed air

Optional dew point sensor ZHM100

	Changeover point:
Pressure dew point	-45 °C ex-factory setting; adjustable via the menu from -25 to -50 °C in 5 °C. steps
at 7 bar	alarm set-point:
	-40 °C ex-factory setting; always 5 °C above the changeover-point.

Electrical connections

Mains voltage	230 V, 50-60 Hz
Protection class	IP65

Materials of construction

Filters	See product-specification regarding GL filter ref: ZL and XL
Pressure vessels	Normal steel, welded
Valve blocks	Aluminium
Piping	Steel, zinc-coated
Seals	NBR
Dryer filling	Mixture of aluminium-silicates and activated alumina
Purifier filling	Mixture of activated carbon and catalyst

Pressure vessel approvals

EU	Approval for fluid group 2 in accordance with the Pressure Equipment Directive 97/23/EC, module B+D: product range BSP-MT 10 to 35 in accordance with category II; product range BSP-MT 45 to 95 in accordance with category III.
