

Solutions for imaging equipment

The heritage of innovation

Ewellix is a global innovator and manufacturer of linear motion and actuation solutions used in assembly automation, medical applications and mobile machinery. Formerly part of SKF Group, the Ewellix Group consists of 16 sales units and eight factories. External net sales are approximately 2.3 SEK billion and we employ around 1200 people. Ewellix is headquartered in Gothenburg, Sweden and is owned by Triton.

Technology leadership

Our journey began **over 50 years** ago as part of the SKF Group, a leading global technology provider, with the world's first precision ball and roller screw factories. Our history with SKF provided us with the **expertise to continuously develop new technologies** and use them to create cutting edge products that offer our customers a competitive advantage.

In 2019, we became independent from SKF and changed our name to Ewellix. **We are proud of our heritage.** This gives us a unique foundation on which to build an agile business with engineering excellence and innovation as our core strengths.

Global presence and local support

With our **global presence**, we are uniquely positioned to deliver **standard components and custom-engineered solutions**, with full technical and applications support around the world. The long lasting relationships with our distributor partners allow us to support customers in a variety of different industries. At Ewellix, we don't just provide products; **we engineer integrated solutions** that help customers realise their ambitions.

The way to care

In today's medical world, high efficiency and safety are key requirements. Hospital environments become increasingly complex and expensive; effectiveness, reliability and speed are crucial at a higher regulation level.

Doctors need to be precise in their diagnostics and fast. They must rely on their equipment during their examination and imaging procedures.

Workflow and speed are equally important, as is patient safety and ergonomic support. Focus on quality and reliability, coupled with supporting and monitoring services, can put a healthcare device manufacturer at the forefront of medical imaging instead of the healthcare device industry.

At Ewellix, we have an in-depth understanding of the medical device industry and based on our 30's years of experience and gained knowhow, we have developed a unique range of products and services for our advanced actuation and guiding solutions, manufactured to meet the latest industry's requirements and to comply with necessary healthcare specifications and regulations, such as EN and UL standards.

From concept to product launch, Ewellix strives to achieve the best quality and highest safety standards.

Ewellix offers a full range of products specially designed for medical applications, which provide:

- High performance and reliability
- Compact and robust designs
- Compliance with standards and regulations
- Extensive industry experience and knowledge
- Global presence and knowledge support

Imaging trend

- Productivity and patient flow improvement
- Higher safety standards and more regulations
- Aging of the world population
- Increasing obesity and patient weight

Value proposition

- Safe and reliable lifting and linear motion
- Quiet and friction-less movement
- Highest load capacity and speed
- Comply with standards and regulations

General x-ray

Our state-of-the-art x-ray equipment ranges from motionless to fully electrically synchronised motion sequences. We are the first choice for patient tables (Bucky tables), ceiling supported x-ray tubes, and highly flexible wall stands and complete (U-shaped) solutions. Ewellix not only helps you to improve patient comfort, but we also improve the functionality of your equipment, particularly in the area of lifting and sliding tables.

Our medically certified electrical lifting columns and actuators, combined with our wide range of cutting-edge linear guides, ensure faster time to market. Ewellix would be delighted to demonstrate the quality of our products to you for your next development project.

Ewellix solutions

Features

- Higher productivity
- Easily accessible patient table
- Equipment for manual and motorised adjustment
- Compact ceiling-mounted systems
- Increasing regulation and norms (UL/EN 60601)
- Caters to trend in increasing obesity

Benefits

- More functionally, combined with high load and speed capability
- Optimal combination of minimum retracted length and extended stroke length
- High knowledge and expertise in medical imaging applications
- Lowest friction linear guides for manual movements
- Products in compliance with norms and regulations
- Silent and smooth motion with soft-start and -stop functionality

Ewellix solutions

Features

- Additional capability for cardio-vascular imaging
- Fast, easily adjustable equipment
- Increasing regulation and norms (UL/EN 60601)
- Quiet operation provides a better environment for patients and professionals

Benefits

- More functionality combined with controlled motion
- Low-friction motion for hand movements
- Products in compliance with norms and regulations
- Solutions for higher offset loads
- Silent movement with soft start-and-stop functionality

Mobile C-arms are the first choice when it comes to emergency room equipment due to their unrivalled flexibility. The variety of products available range from simple systems to fully electric motion solutions for angiographic examinations.

Ewellix has been providing premium quality electrical lifting columns for this purpose for decades. We are renowned for our bespoke customer-specific installation solutions, as well as cable bushings.

Our robust and solid column construction allows high torque with maximum safety. You can position the C-arm in any direction using our state-of-the-art profile rails. At Ewellix, we would be more than happy to support you during your next development project.

CT patient tables and scanners

Modern CT devices should be as comfortable and efficient as possible, capable of satisfying the rising geriatric population. To achieve this, manufacturers must combine both a comfortable low entry height for their patients and achieve excessive lifting capacities. There is also the need to optimise patient flow whilst reducing CT times and minimising radiation exposure.

Ewellix's wide range of high quality, reliable off-the-shelf and tailor-made solutions offer you the possibility to dramatically reduce overall cycle time, increase patient comfort and improve the quality of the high-resolution images thanks to high lifting speed, the optimised ratio between built-in size and high stroke, such as smooth and precise motion. Let us convince you about our cutting-edge solutions.

Ewellix solutions

Features

- Improved high-resolution imaging
- Shorter examination cycles
- Accuracy in mechanical motion
- Easy patient table access
- Increasing regulation and norms (UL/EN 60601)
- Caters for trends in increasing obesity
- Optimum physical and emotional environment for patients

Benefits

- More functionality, combined with increased speed
- Knowledge and expertise in motions technology
- Precision in linear motion and guiding
- Optimal lift combination of minimum retracted length and extended stroke
- Products in compliance with norms and regulations
- Solutions for more load-carrying capacity
- Silent movement with soft start-and-stop functionality

Ewellix solutions

Features

- Easily accessible patient table
- Improved high-resolution imaging
- Increasing regulation and norms (UL/EN 60601)
- Higher examination efficiency through fast and smooth motion
- Caters for trends in increasing obesity

Benefits

- Optimal lift combination of minimum retracted length and extended stroke
- Products in compliance with norms and regulations
- Solutions for more load-carrying capacity
- Silent and smooth movement with soft-start and -stop functionality

The growing geriatric population, both in developed and developing economies, plus an increase in chronic diseases globally, has driven the demand for technological advanced MRI systems to detect and diagnose abnormalities within the body.

Ewellix's proven know-how in linear motion solutions can help speed up the development of your next-generation MRI system. For years, we have supplied a wide range of top quality, reliable off-the-shelf and tailor-made solutions adding value and providing greater flexibility to medical imaging systems. Our robust and renowned actuators and telescopic columns are easy to install, medically approved and provide high rigidity.

Let us convince you about our cutting-edge solutions.

Angiography patient tables

Patients who must undergo a cardiac catheter examination or coronary angiographs require a high degree of comfort and safety, whilst the most crucial factor for medical staff is to ensure that their surgical procedures run as smoothly as possible.

The crucial requirements in ensuring optimum control of radiation exposure for patient operation tables are flexible table heights that allow comfortable working conditions and maximum linear movements of their telescopic columns.

Ewellix's wide range of products includes ball and roller profile rails for maximum rigidity and stability and purpose-made actuators for lifting and tilting. Our unique precision rail guides provide unparalleled smoothness in tabletop movements.

We would be more than delighted to assist you with your specific requirements.

Ewellix solutions

Features

- Highest accuracy in patient positioning
- Lowest rolling friction in linear guides
- High safety with linear guides
- Solutions to increase safety factors
- Reliable with "Anti Creeping System"
- Excellent permanence compactness ratio

Benefits

- Knowledge in imaging applications
- Smooth and nearly frictionless motion
- Best for manual patient table moves
- Proven and reliable industry solutions

Ewellix solutions

Features

- Shorter examination times
- High accuracy in mechanical motion
- Easy patient table access
- Increasing regulation and norms (UL/EN 60601)
- Lifetime usage without maintenance

Benefits

- Cutting-edge technology with increased speed
- Knowledge in high-precision rotation and linear motion
- Solutions for ultimate load-carrying capacity
- Products in compliance with norms and regulations
- Virtually maintenance-free solutions

Cancer therapies with high radiation doses require extreme precision and repetitive accuracy. Extremely rigid and reliable tables with the highest accuracy reduce the risk of adverse reactions for patients. For treatment purposes, the table must be able to move in practically all directions.

Ewellix planetary roller screws and profile rails are an effective and reliable choice for improving repeatability in table positioning. We have long been the world leader in this market.

Our precision rail guides guarantee longitudinal movements that deliver maximum stability and optimum positioning accuracy, at the same time minimising friction.

Mammography

Thus, the growing prevalence of breast cancer the demand in technological advanced breast imaging systems is growing to enable early detection. Modern digital mammography systems providing the highest depth resolution diagnostic accuracy and enabling comfortable and relaxed patient care, must be efficient and cost-effective.

Ewellix offers a wide range of perfectly tailored solutions. Lifting becomes easy when using one of our smooth-running telescopic columns or an actuator combined with our high-quality profile rail guides. For the adjustment of the collimator, detector and compression paddle, our precise and reliable miniature profile rail guides and ball screws are the right choices.

Ewellix solutions

Features

- Improved high depth resolution imaging
- Enhanced productivity and cost-effectiveness
- Patient-friendly and comfortable examination
- Increasing regulation and norms (UL/EN 60601)
- Lifetime usage without maintenance

Benefits

- Precision in linear motion and guiding
- Compact drive solutions with a high lifting speed
- Optimal lift combination of minimum retracted length and extended stroke
- Products in compliance with norms and regulations
- Silent and smooth motion with soft-start and - stop functionality
- Virtually maintenance-free solutions

- Lifetime usage without maintenance

Benefits

- Long lifting stroke at compact retracted size
- High lifting load and speed capability
- Smooth and nearly frictionless guiding
- Products in compliance with norms and regulations
- Silent and smooth motion with soft-start and - stop functionality
- Virtually maintenance-free

Increasingly, both 2D and 3D imaging systems are being used to improve teeth reconstruction under real-time conditions. 3D panoramic images not only reveal defects but also provide data for modelling dental prostheses. Ewellix offers lifting devices designed to ease patient examination for 3D imaging systems. Our range includes tailor-made long-stroke actuators and low-noise lifting columns. Motion control is achieved in the imaging system headpiece by using high-precision miniature profile rail guides.

Linear guides

	LB-range	LLS-range	LLT-range	LLU-range	LW-range
Size and range	3 to 80	7 to 15	15 to 45	25 to 65	2 to 9
Dynamic load rating	up to 37,5 kN	up to 12,5 kN	up to 72,5 kN	up to 276 kN	more than 300 kN
Speed	up to 5 m/sec	up to 5 m/sec	up to 5 m/sec	up to 3 m / sec	more than 10 m/sec
Acceleration	up to 100 m/ sec ²	up to 140 m/ sec ²	up to 75 m/ sec ²	up to 50 m/ sec ²	up to 160 m/ sec ²
Accuracy	up to 50 µm at 4 m	up to 10 µm at 2 m	up to 18 µm at 4 m	up to 7 µm at 4 m	up to 2 µm at 1 m
Material options	Stainless steel	Stainless steel	Coatings	–	Stainless steel or coated
Characteristics	Easy integration	Miniature sizes	Economic solution	High load capacity	Precise with lowest friction

Ball and roller screws

	SP	SR	SV
Diameter	8 to 16	8 to 39*	10 to 32*
Lead	2 to 5	2 to 10*	1 to 2
Max push/pull load	1 000 to 5 000 N	2 000 to 90 000 N	2 000 to 30 000 N
Max speed**	1 000 mm/s	1 000 mm/s	400 mm/s
Backlash free option	✓	✓	✓
Preload option	–	✓	✓

* Higher sizes, leads and speed available in standard for more demanding applications.

** Value varies depending on diameter and lead. Most favourable case.

Our expertise, your success

Ewellix has expertise in developing unique products with a perfect fit for specific applications. With the CPMC lifting column, built especially for high-end mobile C-arm machines, Ewellix has again proven its outstanding development skills for highly customised products. Thanks to the all-new guiding tube system and its patented glider design, the lifting column can handle high offset loads of up to 3 000 Nm and nominal loads of 4 000 N together. The column is equipped with an advanced BLDC motor with high power density, providing sufficient power for lifting high loads at high speed.

Another benefit is that the built-in BLDC encoder can be used for position feedback, enabling precise positioning of the lifting column. The rotational motion is transmitted into vertical lifting motion via a highly efficient ballscrew, improving overall energy efficiency and wear and tear.

Features

- Extremely high offset load capability
- High lifting loads and speed
- Virtually maintenance-free
- High level of product safety
- Multiple options to customise the product

As a safeguard, the column is equipped with the following safety features:

- Back-up nut – preventing the column from collapsing in case the primary nut fails
- Self-locking wrap spring brake system – preventing the column from moving back at any running conditions
- Mechanical end limits – limiting the travel of the drivetrain mechanically before collapsing, in case the stroke limitation monitoring fails
- Manual operation – An extended gear shaft at the bottom side enables manual adjustment in case of power loss or similar defects

Both the top and bottom attachment plates can be designed according to your needs, as well as the configuration of the cable feedthroughs and chains, making your CPMC lifting column capable of meeting all your requirements. Below you can find an overview of the options available.
